|----|--|---------------------|
| 1. | A football is kicked by a player while it is 0.5 <i>meters</i> above ground. Based on the trajectory of the ball, the height h of the ball is modeled by the following nonlinear equation, where t is in seconds:
$h(t) = -4.9t^2 + 7.7t + 0.5$ <p>After how many seconds will the ball reach the ground again? Find the result using Newton-Raphson method guaranteeing at least 3 significant digits correct.</p> | 9
(CO2)
(PO1) |
| 2. | Provide a comparative analysis between Secant method and False Position method. | 6
