

Guidelines for Presenting C++ Term Project

Part 1: PowerPoint Presentation and Code demonstration (12-15 minutes)

✓ Introduction:

- Briefly introduce the project and its objectives.
- Why is this project important or useful?

✓ Project Overview:

- Explain the core functionality of your C++ project.
- Provide a **high-level** architecture overview (use diagrams if needed).

✓ Key Features & Implementation:

- Highlight important features and functionalities.
- Mention key **object-oriented programming (OOP) principles** used.
- Explain any external libraries or frameworks used.

✓ Code Demonstration:

- Show the **most important parts** of your C++ code (avoid reading the entire code).
- Explain how the main logic works.
- If possible, **run a live demo** to showcase the output.

✓ Challenges Faced & Solutions:

- Mention any difficulties encountered and how you solved them.

✓ Future Improvements:

- How can your project be expanded or improved?

✓ Code sharing:

- Please upload your code in the GitHub and share the link.

Part 2: Q&A Session (8-10 minutes)

- Invite the audience (or instructors) to ask questions.
