Minhaz-Us-Salakeen Fahme | CEO, Battery Low Interactive & FeedBoss

THE REALITY OF INDUSTRIAL WORK HASN'T CHANGED IN TWENTY YEARS.

THE MANUAL GRIND

Meet Kamal Bhai. 40 staff. 18 years in business.
Never leaves by 6 PM.

- ⚠ Rebuilding the 900th manual report by hand.
- ⚠ 3 people checking 1 invoice. Finding nothing.
- ⚠ An order buried in 340 unread WhatsApp messages.
- ⚠ A factory license that expired 11 days ago.

THE AI ALTERNATIVE

The exact same Tuesday, automated.

- ✓ Report writes itself overnight from scattered data.
- ✓ Only mismatched invoices reach a human desk.
- ✓ WhatsApp orders auto-populate the master sheet.
- ✓ License flags itself 60 days before expiration.

HE DIDN'T CHANGE HOW HIS FACTORY WORKS.
HE CHANGED WHO DOES THE READING.

I sat exactly where you are sitting today.

The Foundation
IUT Alumnus, CSE 2016.

CGPA 3.64, First Class.
Learned the theory.

1

The Builder
Founder & CEO, Battery

2

Founder & CEO, Battery Low Interactive.

Pioneering XR studio.
300+ global projects.
Shipped real software.

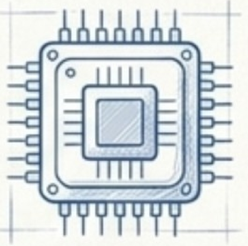

The Global Perspective

US State Dept. Professional Fellow.

US State Dept. Professional Professional Fellow.

Author: “How to Make a Game”.
President, IGDA Bangladesh.

The AI Era

The AI Era
CEO, FeedBoss AI.

Shipped complex AI SaaS in 3 months.
Learning to automate.

You are spending four years learning how to build.
Today, I am going to show you how to automate.
Let’s bridge the gap between academic theory and shipping real industrial products.

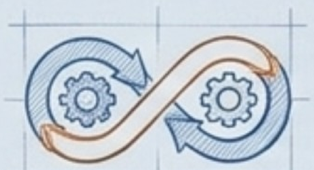

In industry, AI is simply the world's best-read intern.

Has read everything ever written.

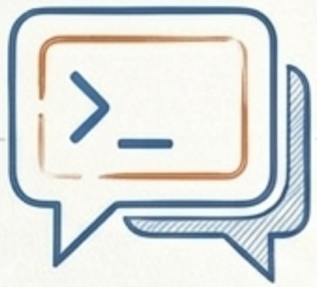

Knows nothing about your specific business.

Never gets bored or tired.

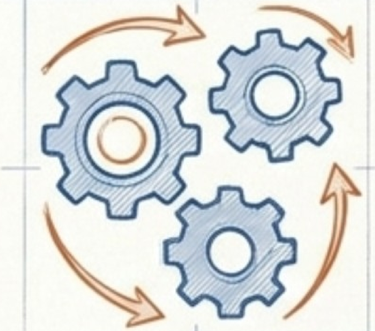

MODEL

Answers when you ask.

A consultant. You ask a question, it replies, and then it waits for you to ask again.

AGENT

Has a job and does it.

A junior employee. You assign the task and the rules once. It runs every day, on its own, overnight.

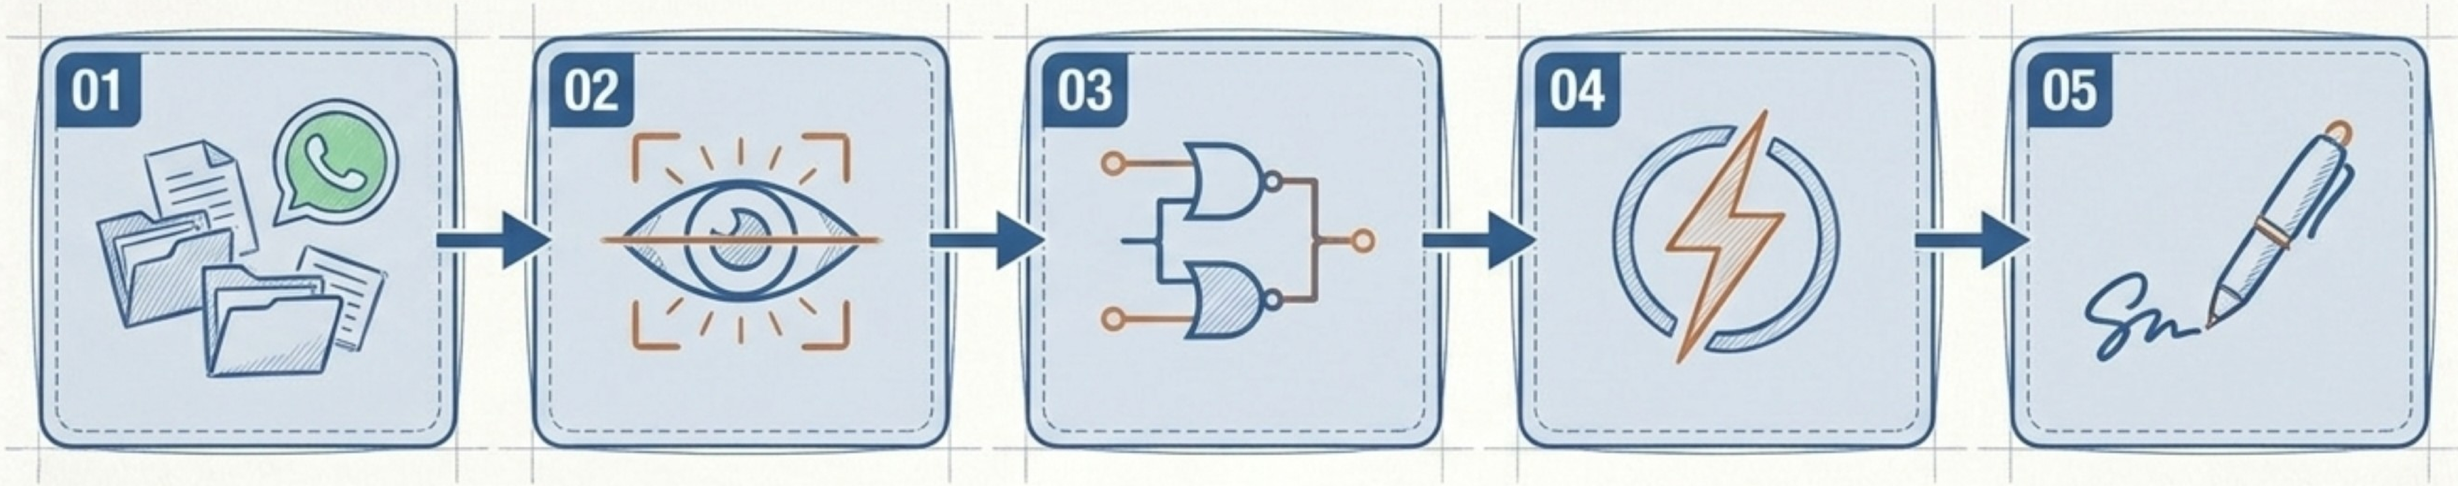

The industrial shift is moving entirely from **Models** (asking) to **Agents** (doing).

The AI Model Matrix: Choosing the right engine for the task.

Foundation Model	Primary Architecture / Strength	Industrial Best Use-Case
ChatGPT (OpenAI)	The generalist baseline.	Marketing, content generation, and everyday use. The safest first choice.
Claude (Anthropic)	The deep thinker.	Long document analysis, writing in a specific human voice, and heavy coding workflows.
Gemini (Google)	The ecosystem native.	Best if the client runs entirely on Google Workspace. Turns massive document folders into audio briefings.
Perplexity	The verified researcher.	For sourcing real-time information with citations when hallucination is strictly unacceptable.
DeepSeek	The high-volume engine.	Highly cost-efficient for running simple, repetitive extraction tasks at massive scale.

Rule of thumb: Pick one. Pay for the API. Build with it for a month before you judge its technical limits.

The universal pipeline of enterprise automation.

Information arrives

Data enters wherever it already lives (email, WhatsApp). No manual entry.

AI reads it

Ingested entirely as-is. Absolutely no cleanup required.

Your rules decide

The developer writes the business logic once. The engine applies it.

Something happens

The system autonomously flags, files, replies, or alerts.

A person approves

The crucial safety net. The human reviews the exception.

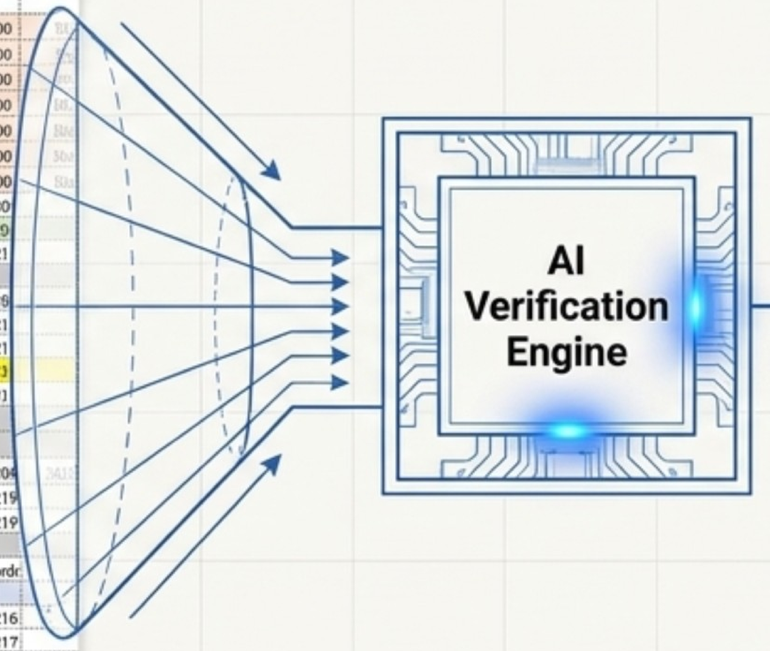

Step 5 never goes away. AI does the reading, but a human does the signing. Be suspicious of anyone who tells you otherwise.

Why AI fails in practice (and the 30-second engineering fixes).

The Engineering Mistake	The Output (Mush)	The 30-Second Fix
Zero context.	Generic, robotic advice.	Name the exact supplier, the specific order number, and the precise desired outcome.
Business blindness.	Confident but factually wrong pricing.	Attach your actual source documents (your price lists, policies, and the last 20 quotes).
The endless chat.	AI drags old, irrelevant context into brand new tasks.	Fresh session per task. Treat the API as a new intern, not a colleague with a memory.
Generic blog tone.	“Dear Valued Customer...”	Train the system on a custom profile of your actual, historical writing voice.
AI as a yes-man.	Applauds terrible ideas with perfect grammar.	Explicitly prompt for the counter-argument: “Argue against this. Give me 5 reasons this fails”.

Mid-Scale Automation:
The aCcounts check themselves.

Date	Pay To	Particulars	Head	V. #	CH
01.07.2026					
01.07.2026	Mr Salman	Mr Salman Sr Officer - HR Admin & C	Advance against Salary & Boiler Licence	180.700

400 line items read from unstructured sheets

Matched automatically against master purchase orders in seconds

Only the **2 mismatches** are routed to a human

This used to be one person's entire Thursday. Now, they only look at the two rows that are wrong.

Mid-Scale Automation: 60 pages in, 1 page out

61 pages read in **74 seconds**

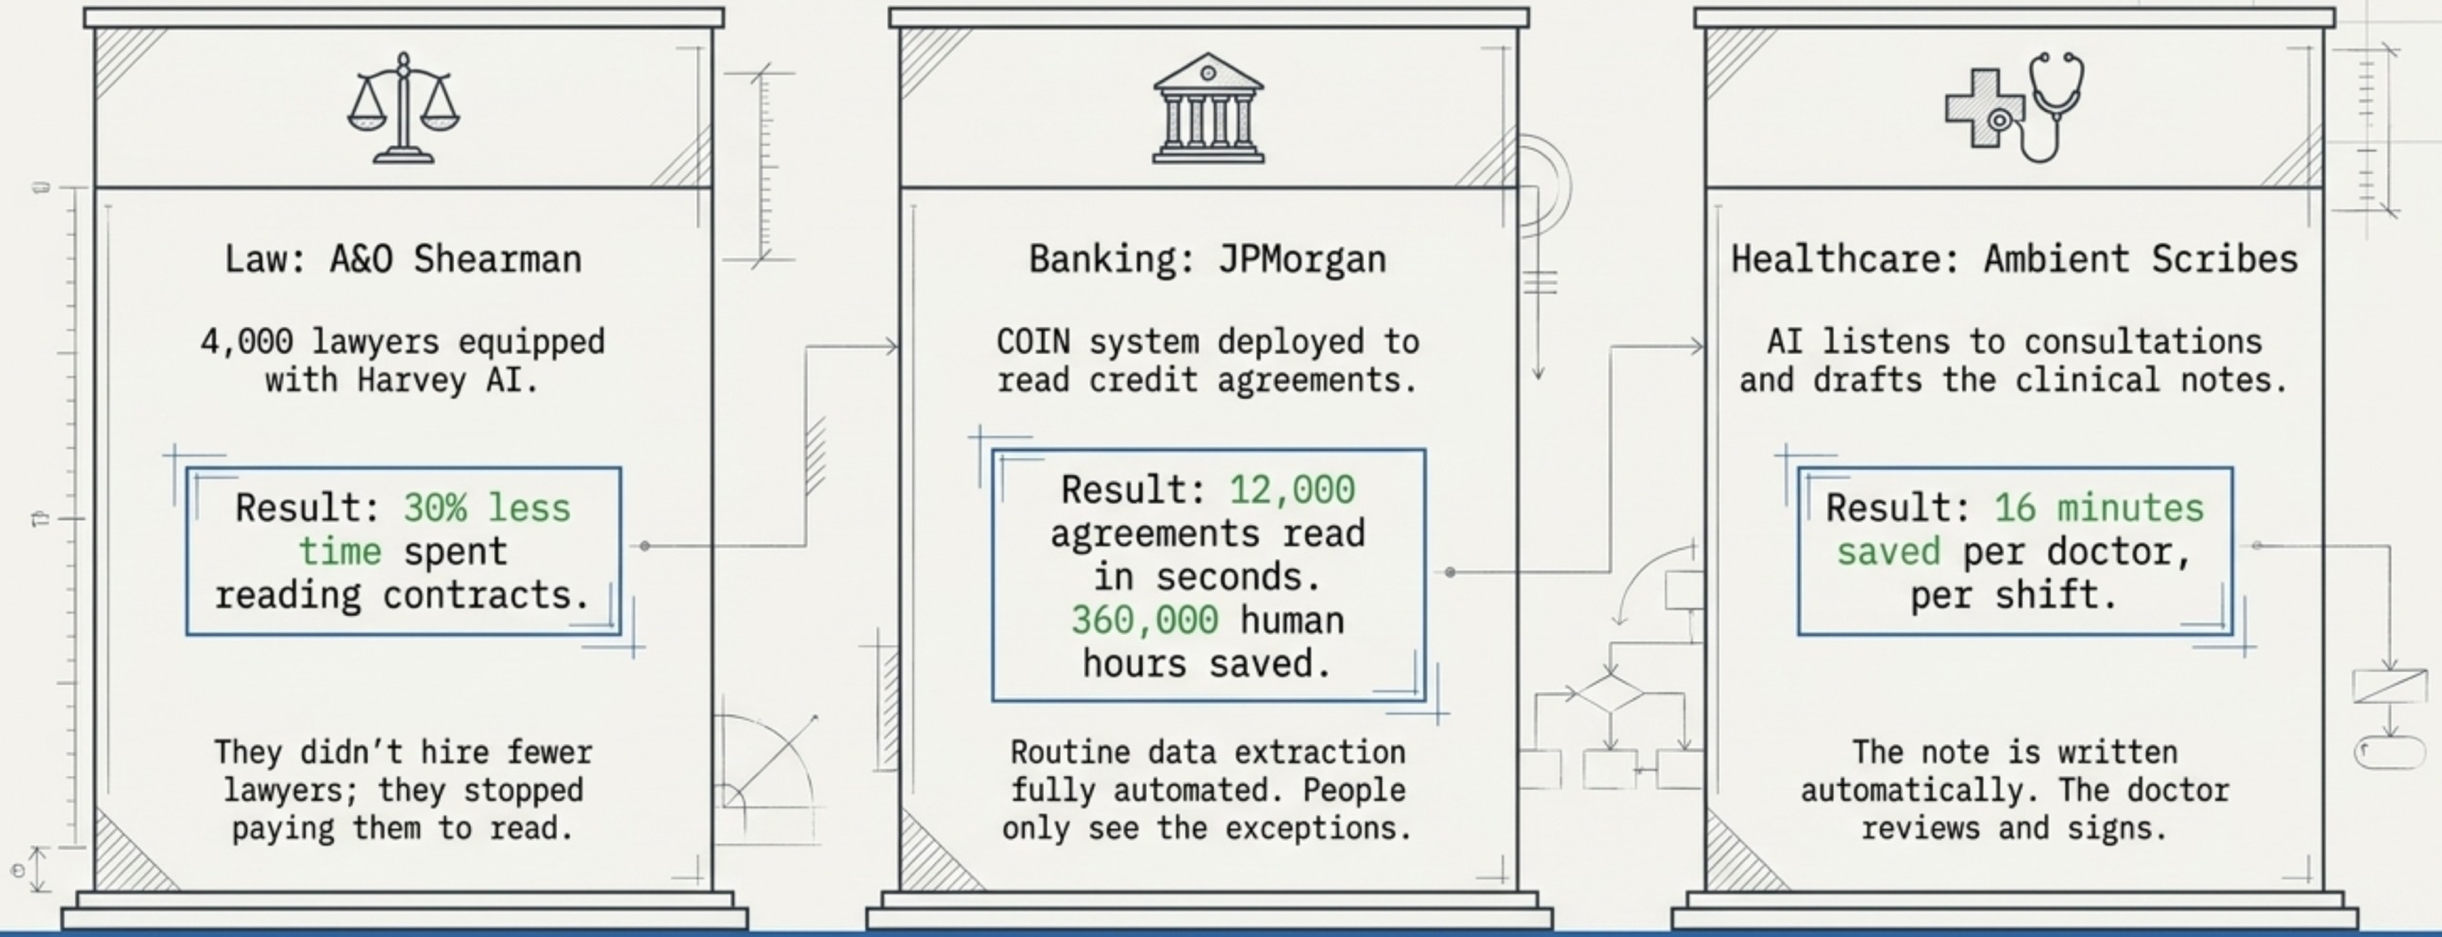

Rule Check: Extract variables and flag non-standard deviations

Contract Extractor Output

- Parties & Key Dates successfully extracted and verified.
- Clause 14.2 - Auto-renews for 3 years. (Company standard is 60 days).
- Clause 9.1 - Late delivery penalty uncapped. No ceiling clause found.

No legal advice given. No judgment replaced. The machine does the reading so the human can do the thinking.

Enterprise Scale: How global giants are running these pipelines today.

Law: A&O Shearman

4,000 lawyers equipped with Harvey AI.

Result: 30% less time spent reading contracts.

They didn’t hire fewer lawyers; they stopped paying them to read.

Banking: JPMorgan

COIN system deployed to read credit agreements.

Result: 12,000 agreements read in seconds. 360,000 human hours saved.

Routine data extraction fully automated. People only see the exceptions.

Healthcare: Ambient Scribes

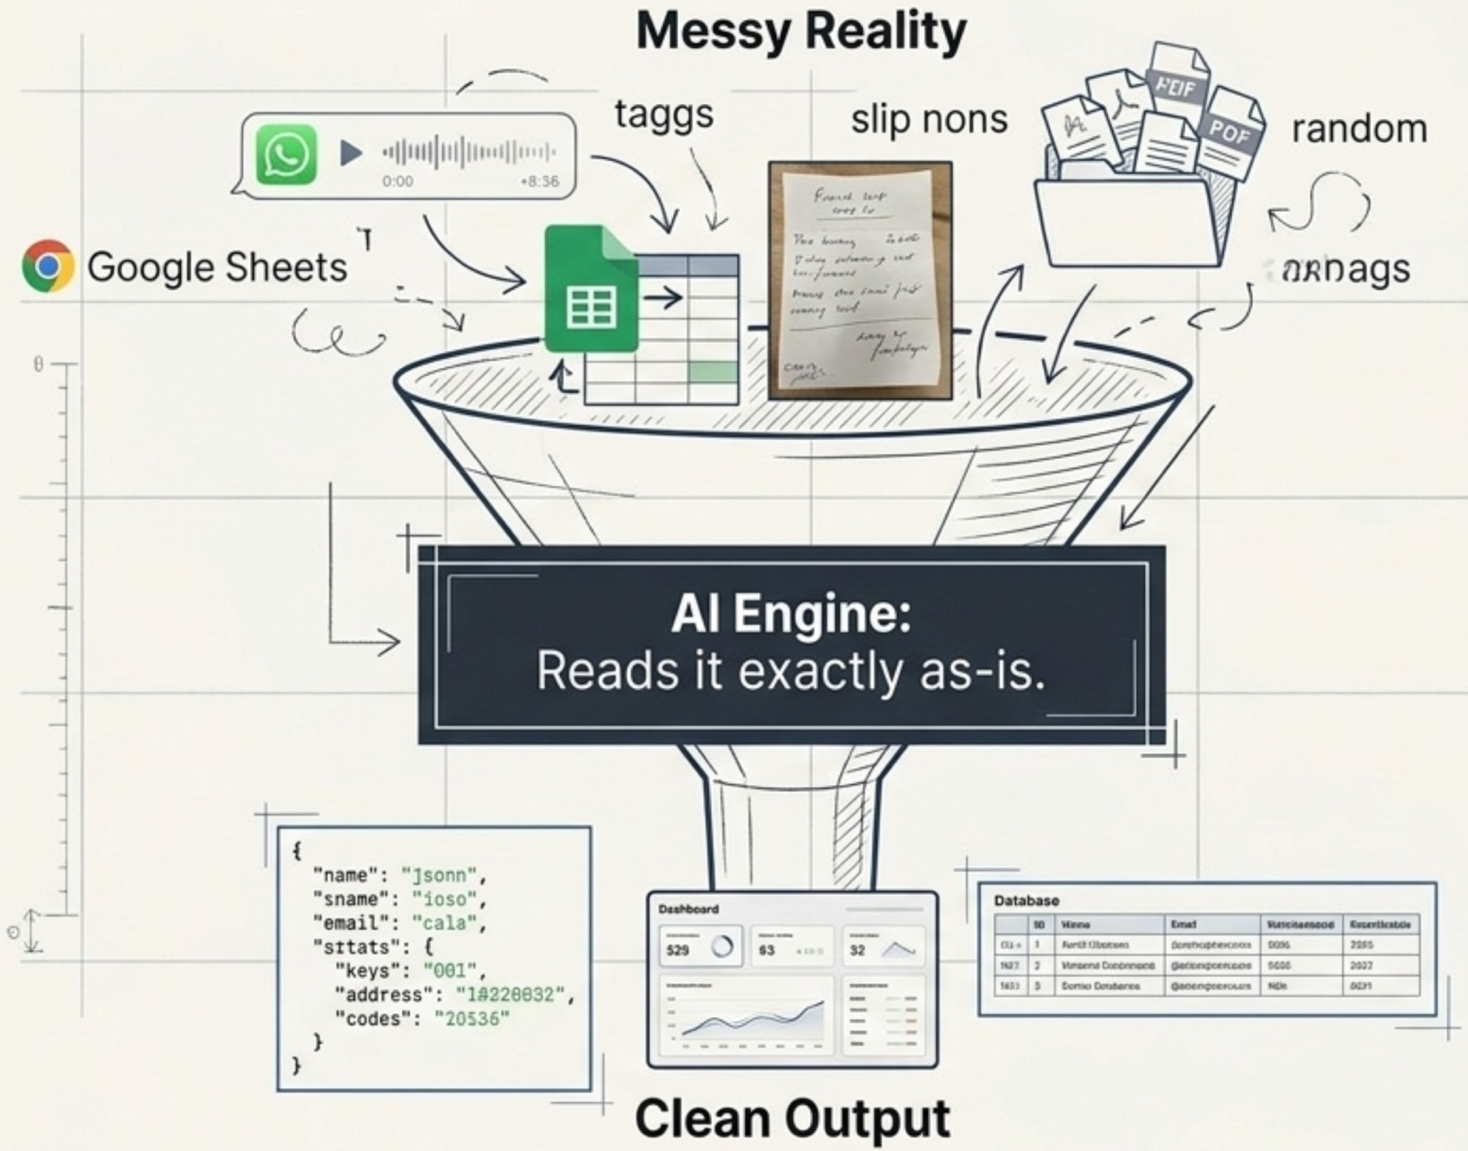

AI listens to consultations and drafts the clinical notes.

Result: 16 minutes saved per doctor, per shift.

The note is written automatically. The doctor reviews and signs.

They didn’t transform the entire enterprise. They completely automated one high-volume, boring task.

The “No Cleanup” Paradigm Shift.

You do not need an ERP to start.

You do not need pristine, normalized databases.

Leave your messy data exactly where it is.

Modern AI reads the mess.

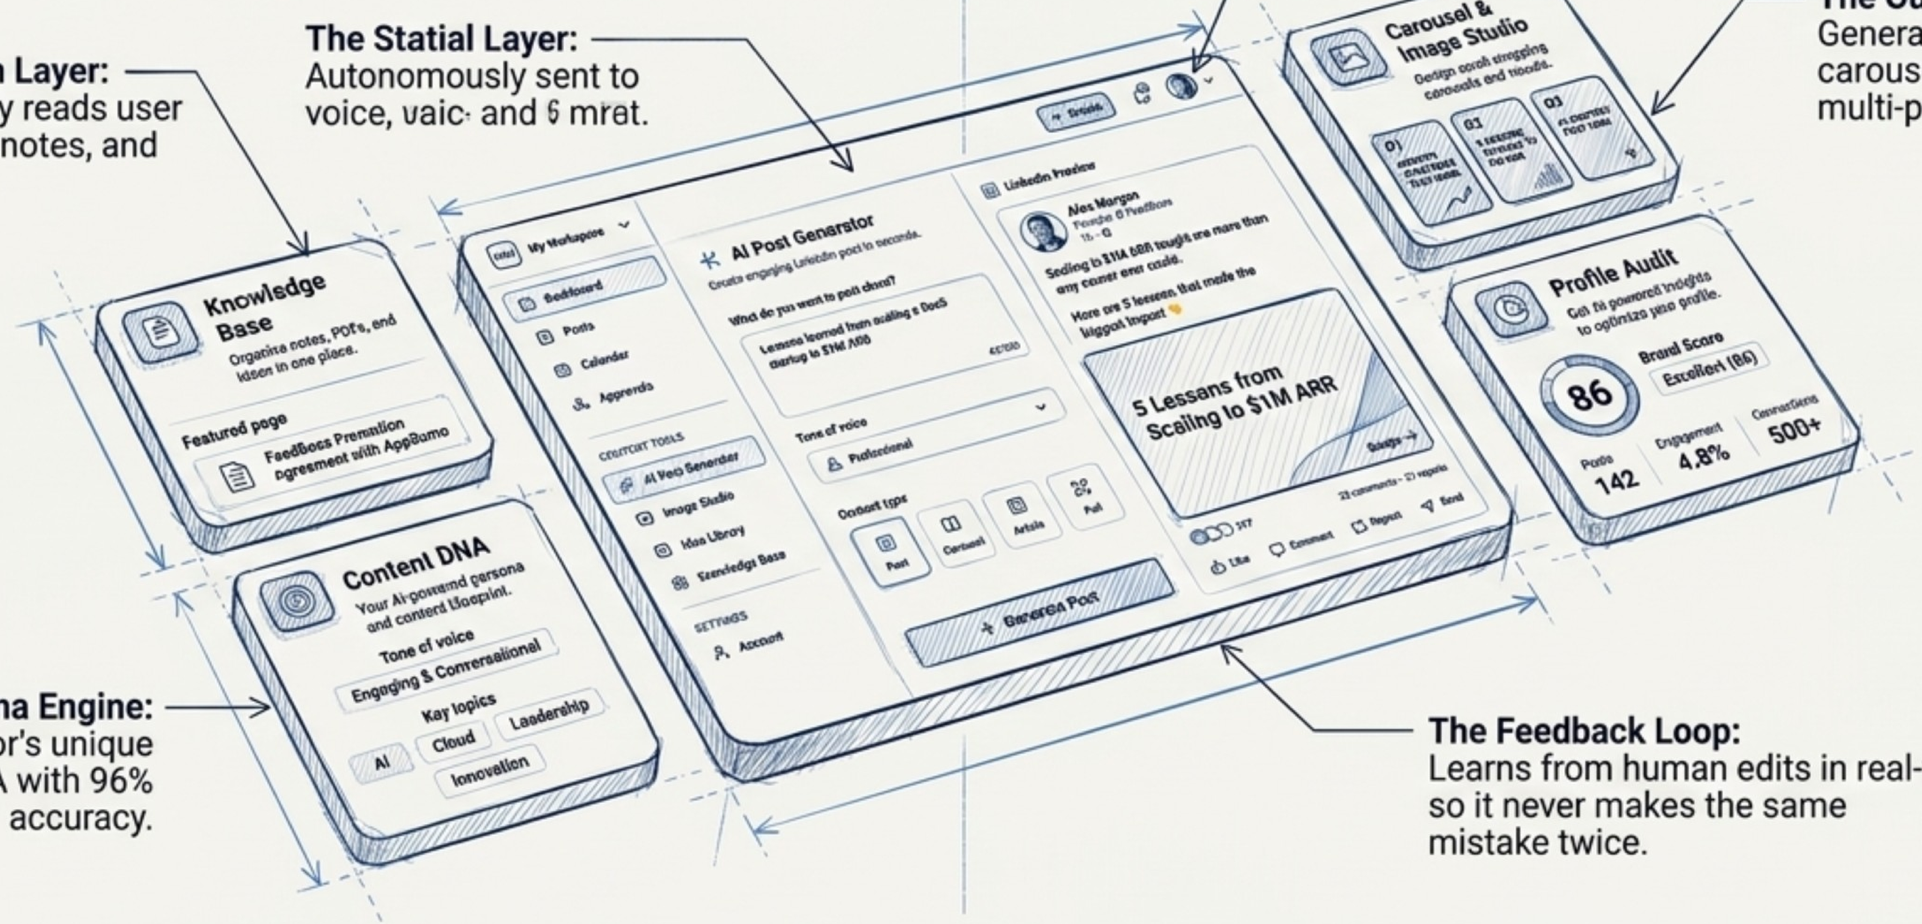

Building Complex AI Products: The FeedBoss Architecture.

The Ingestion Layer:
Autonomously reads user history, voice notes, and PDFs.

The Statial Layer:
Autonomously sent to voice, vaic· and 6 mret.

The Carousel Layer:
Design set p LinkedIn carouses vioudes.

The Output Layer:
Generates formatted carousels, videos, and multi-platform posts.

The Persona Engine:
Matches author's unique voice DNA with 96% accuracy.

The Feedback Loop:
Learns from human edits in real-time so it never makes the same mistake twice.

This isn't just an API call. It's a system of 24 tools engineered into one workspace, designed to replace entire content teams.

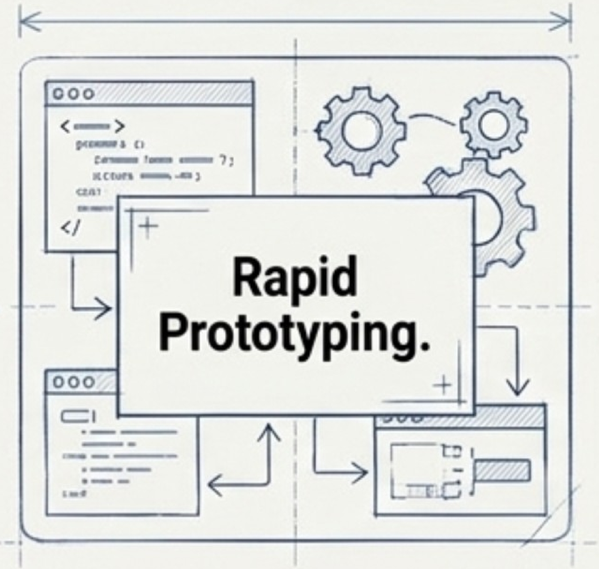

Building Fast: From viral post to shipped product in 30 days.

The Signal

252,000 views.
75,000 people engaged in 7 hours.

The Build

Wrapping the Claude API into a giftable consumer experience.
Secure Stripe checkout, unique redemption codes, automated email delivery.

The Product

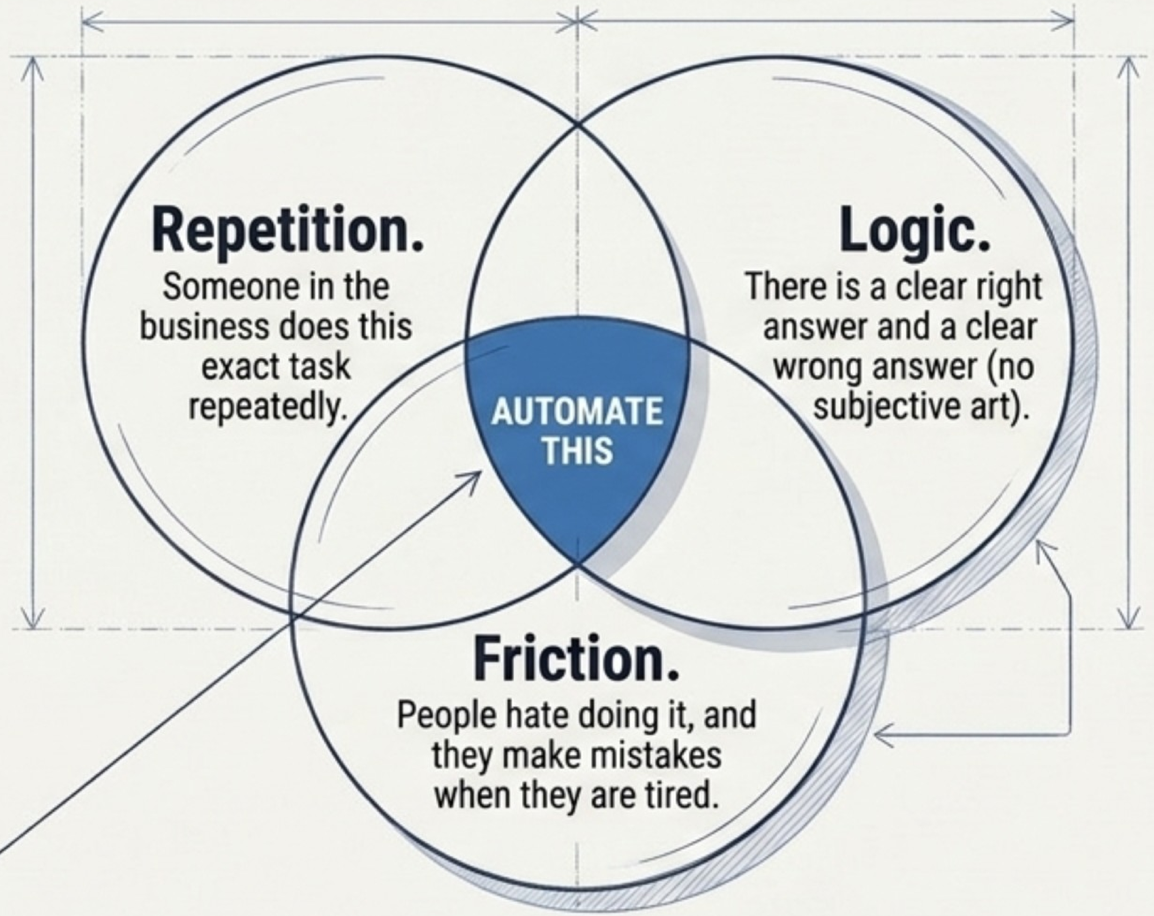

Boon.

Shipped in 4 weeks.

Use-cases:
Graduation edge.
Breakup thought-partner.
Wedding assistant.

The signal was loud, so I built it. Modern AI allows you to go from a half-formed thought to a live, monetized product in weeks.

The Automation Heuristic: What should you actually build?

If all three are ticked, automate it. Do not start with the most important task in the business. Start with the most boring one.

Find one task this week.

- Enter your industrial training.
- Look for the "Kamal Bhai" problems.
- Find the manual grind.
- Apply the 5-step loop.
- Build the solution.
