# CLASS 4: SELLING AND SCALING WITH ONE OR TWO PEOPLE.

Find buyers, reach them, keep them. The team is you.

# WHAT AI RUNS, WHAT YOU RUN.

| | | AI RUNS IT | YOU KEEP IT |
|---|---|---|---|
| 01 | SEARCH | Keyword research, briefs, drafts, site audit. | **Which battles are worth fighting.** |
| 02 | CONTENT | Topics, drafting, scheduling, repurposing. | **The voice file and the real examples.** |
| 03 | OUTREACH | List building, per-person research, sequences. | **The first 20 messages, read before sending.** |
| 04 | COMMUNITIES | Monitoring and reply drafts. Nothing else. | **Every post, from your own account.** |
| 05 | MARKETPLACES | Listing copy, FAQ, review replies. | **Deal terms and refund calls.** |

The five channels: search and AI answers, content, outreach, communities, marketplaces.

**AI does the volume. You do the judgement and anything irreversible.**

# THE CHANNEL CHANGES THE PRODUCT.

## OUTREACH

Free trial. Short sales cycle. ROI in the pitch.

## MARKETPLACE

Polished product page. Lifetime deal math. Support at volume.

**RULE** **Pick the channel before you finalize the spec.**

# FINDING THEM ONE BY ONE.

**01**
## DEFINE
ICP as a filter, not a sentence.

**02**
## SCRAPE
Overnight, on a schedule.

**03**
## ENRICH
Posts, stack, funding, per lead.

**04**
## VERIFY
Verified, deduped, scored.

leads.csv — WEEK 12

~~50,000~~ → **163** verified leads

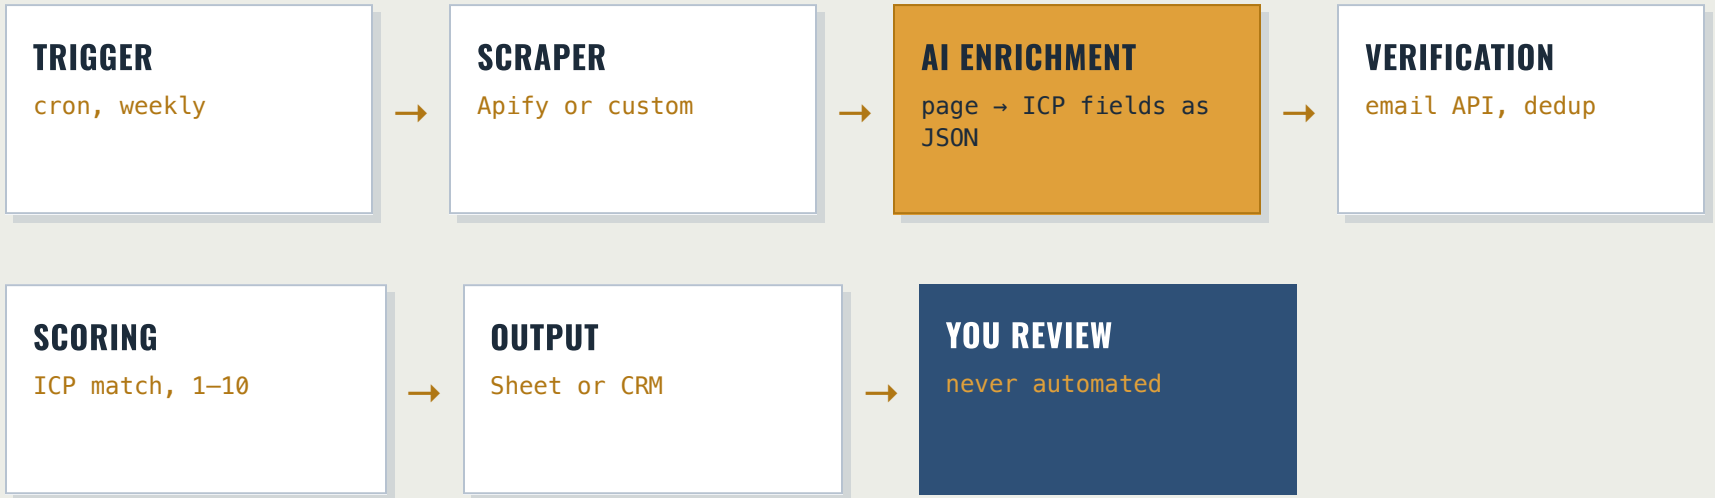

| | |
|---|---|
| ops@nordwerk-gmbh.de | 9.4 |
| m.silva@fabrilpack.br | 9.1 |
| procurement@teknokal.tr | 8.8 |

+ 160 more

Every row carries its source URL.

**WATCH FOR** 50 verified names beat 5,000 scraped ones.

# THE LEAD PIPELINE, UNDER THE HOOD.

**n8n or Make runs it. One evening to set up, every week after that.**

# SEO WITH AI, START TO FINISH.

RUNS WEEKLY, UNATTENDED

**One keyword sheet in, published pages out.**

01

## KEYWORD RESEARCH

`Ahrefs / SEMrush API`

Pull volume, difficulty, intent. AI clusters into topic groups.

→ **Prioritized keyword sheet**

02

## CONTENT BRIEF

`Top-10 SERP crawl`

AI extracts structure, headings, length — and the gaps all ten missed.

→ **Outline + target length**

03

## DRAFT

`Brief + voice file`

AI writes from your voice samples and real product examples.

→ **Scored draft (Surfer)**

04

## TECHNICAL AUDIT

`Site crawl`

Speed, broken links, missing meta, schema, crawl errors.

→ **Prioritized fix list**

**YOUR HANDS** You pick the fights · You approve the angle · You edit every line · You ship the fixes

**This was five people. AgentiSEO does all four.**

AGENTISEO

# REPLACED THE TEAM, KEPT THE OUTPUT.

## 5 PEOPLE → 1 AI TOOL

SAME KEYWORD TARGETS · SAME CONTENT VOLUME

**Built it for myself. Now it's a product.**

# HOW MODELS DECIDE WHAT TO RECOMMEND.

| | | |
|---|---|---|
| 01 | WHAT THEY READ | Public pages, structured data, reviews, Reddit. |
| 02 | WHAT THEY MISS | Anything behind a login, thin, or crawler-blocked. |
| 03 | WHAT YOU CONTROL | Say it in the format they can parse. |

**Righted audits this across ChatGPT, Claude and Gemini.**

# TEST YOUR AI VISIBILITY RIGHT NOW.

Ask ChatGPT: what is [your product] and who is it for? Ask Claude the same. Ask Gemini the same. Paste all three answers into a doc. Highlight where they disagree, where they're wrong, and where they don't mention you at all.

**If the model doesn't know you, neither does anyone who asks it.**

# THE AI CONTENT ENGINE.

01

## FIND TOPICS

Scrape Google autocomplete, People Also Ask, Reddit. AI clusters by intent: informational, comparison, transactional.

02

## DRAFT

AI writes from brief + voice file (10–20 past posts) + product examples. Not from nothing.

03

## DISTRIBUTE

LinkedIn API or scheduler, CMS API or markdown to a static site, Beehiiv or ConvertKit for the newsletter.

04

## REPURPOSE

**One article → LinkedIn post, carousel (Canva API), blog, newsletter snippet, video script, thread. AI reformats each.**

**Feedboss does this for LinkedIn. The simple version is what people paid for.**

# AI CONTENT WITHOUT A VOICE IS NOISE.

“In today’s fast-paced world of agency management…”

Sounds like every other AI post.

**NOBODY READS IT**

50 past posts + screenshots + your real numbers

Sounds like you.

**PEOPLE REPLY**

**RULE** **Feed it your writing first. Generic content is worth what it costs.**

# COLD OUTREACH THAT DOESN'T GET FLAGGED.

| | | |
|---|---|---|
| 01 | LIST | Every address verified before sending. |
| 02 | RESEARCH | Site, bio, last three posts. One specific line per person. |
| 03 | WRITE | Under 80 words. No images, no links, one ask. |
| 04 | SEQUENCE | Day 1, day 3, day 7. Tools: Instantly, Smartlead or Lemlist. |
| 05 | TRACK | Opens, replies, meetings. AI flags what works. Kill what doesn't. |

**WATCH FOR** **More than 50 cold emails a day from a new domain and you're in spam.**

# THE DOMAIN SETUP NOBODY TELLS YOU.

WEEK 0

## SEPARATE DOMAIN

Never your main one. Buy a lookalike: getacme.com for acme.com.

**AI DOES**

Generates 20 variants and checks availability.

WEEK 0

## DNS RECORDS

SPF, DKIM, DMARC on day one. Miss them and you get flagged.

**AI DOES**

Writes the records, then confirms they resolve.

WEEKS 1–3

## WARM-UP

Two to three weeks of fake threads. Warmup Inbox or Instantly.

**AI DOES**

Writes both sides so they read as real conversation.

WEEK 4+

## VOLUME

Start at 5 a day. Add 5 a week. Cap at 50.

**AI DOES**

Watches bounce rates daily, pauses before you burn.

**RULE** **A burned domain costs more than the leads were worth.**

# PICK ONE CHANNEL FOR YOUR PRODUCT.

Why that one?

# BREAK

COMMUNITIES AND MARKETPLACES NEXT

# COMMUNITIES ARE NOT A CHANNEL YOU AUTOMATE.

01

## WHERE THEY ARE

Reddit, Facebook groups, Indie Hackers, Discord, Slack.

02

## THE WRONG WAY

Join, post your link, get banned.

03

## THE RIGHT WAY

Answer questions for two weeks. Then speak up.

**RULE** **Be useful first. Sell second.**

# AI HELPS YOU LISTEN, NOT POST.

**01** Monitoring — one daily digest instead of twelve tabs.

---

**02** Drafting — AI writes it, you post it. Never automate posting.

Mention · Brand24 · F5Bot (free for Reddit) · or n8n with RSS

MARKETPLACES

# SOMEONE ELSE'S AUDIENCE, THEIR RULES.

## APPSUMO

**Cash upfront. ~20% refunds. Support forever.**

## PRODUCT HUNT

One day of traffic. Brand and backlinks, not sales.

## GUMROAD · LEMON

Payments, not discovery. You bring the traffic.

**Feedboss launched on AppSumo. $150K+, 4 partners, ~20% refunds.**

# LAUNCH IS A SEQUENCE, NOT A DAY.

| | |
|---|---|
| **WEEK -4** | Build the waitlist. Landing page, coming-soon on Product Hunt, a few honest posts in communities. |
| **WEEK -2** | Warm the audience. Share screenshots, the build process, early feedback. |
| **DAY 0** | **Launch on the marketplace, Product Hunt and your own channels at the same time.** |
| **WEEK +1** | Answer every review. Fix the loudest complaint and post the fix publicly. |
| **MONTH +1** | Launch traffic is gone. Content, search and outreach are the engine now. |

**Feedboss to AppSumo followed this.**

# AFTER THEY SIGN UP.

| | | THE JOB | WHAT AI RUNS, AND WITH WHAT |
|---|---|---|---|
| 01 | ONBOARDING | Behaviour-triggered emails, not a welcome drip. | AI writes a variant per trigger and rewrites the losers each week. `Customer.io · Loops` |
| 02 | ACTIVATION | Find the one action that separates stayers from leavers. | AI reads the funnel and names the action, then flags who stalled. `PostHog · Mixpanel` |
| 03 | FIRST VALUE | **The first output must work. Seed it with sample data.** | AI generates realistic seed data so the empty state is never empty. `Claude API · n8n` |

**Class 3's first five minutes, with real users this time.**

# SUPPORT THAT SCALES WITHOUT HIRING.

TICKET IN → AI CLASSIFIES → AI DRAFTS REPLY → **HUMAN REVIEWS** → SENT

NEVER AUTO-SENT

### MONEY
Refunds, billing, pricing.

### ANGER
Anything flagged as upset.

### PRECEDENT
Anything that sets new policy.

## AI DRAFTS, YOU DECIDE.

# REPEATED TICKETS ARE PRODUCT PROBLEMS.

**01** Same question ten times? That's a UX issue, not support.

**02** Turn the top three clusters into spec changes.

**Every product I've run, the ticket log was the best roadmap.**

### AI CLUSTERS WEEKLY, THEN ROUTES

`Same question ×10`
Opens a Linear issue tagged ux, linked to every ticket in the cluster.

`Bug pattern`
Dedupes against open issues, appends the new ticket IDs, raises priority.

`Feature cluster`
Posts to the roadmap board with the request count attached.

`Spike vs last week`
Slacks you with the three quotes that explain it.

**You still decide what ships. AI just makes sure nothing goes unlogged.**

# READING YOUR DATA.

IT USED TO TAKE A TEAM

### SESSION REPLAYS
Watch 40 recordings by hand. Half a day, and you forget the first ten.

### THE NUMBERS
An analyst writes the SQL. You wait two days for the answer.

### THE REPORT
Someone builds a weekly deck nobody reads to the end.

YOU DO IT YOURSELF, IN AN HOUR

### SESSION REPLAYS
AI watches all 40 and returns the five where people got stuck, with timestamps.

### THE NUMBERS
You ask in plain English. It writes the query and explains the result.

### THE REPORT
A Monday summary in Slack: what changed, and the one number to watch.

**AI will say everything looks fine. Ask it where the drop is.**

| POSTHOG | HOTJAR | FULLSTORY | AMPLITUDE | METABASE |
|---|---|---|---|---|
| Replays + AI summaries | Heatmaps, rage clicks | Friction scoring | Funnels and cohorts | Query in plain English |

# FIND YOUR BOTTLENECK.

```
Here are my numbers: [traffic] visitors, [signups] signups,
[activated] activated users, [paid] paying users. Where is the
biggest drop? What are three specific things I should test to
fix it? Be specific to my product.
```

## ONE DROP, THREE TESTS.

**WATCH FOR** **If the answer fits any SaaS, it isn’t an answer. Ask again.**

# WHICH CHANNEL DO YOU START THIS WEEK?

And what's the first thing you automate?

# BUILD YOUR LAUNCH PLAN.

Using my spec, my ICP and my channel choice, write a 4-week launch plan. Week by week: what to build, what to write, where to post, who to message. Include the domain setup timeline if outreach is one of my channels.

## FOUR WEEKS, WEEK BY WEEK.

# THREE THINGS.

01

## A CHANNEL

Picked, with a reason.

02

## A LAUNCH PLAN

Four weeks, specific actions.

03

## A SUPPORT PLAN

What AI handles, what stays with you.

NEXT CLASS: AI IN OPERATIONS.
