CLASS 2: DECIDING WHAT TO BUILD.

Today, one idea goes from a guess to a buyer, a price and a list of competitors.

OPEN ONE COMPETITOR PRICING PAGE.

What surprised you?

SECTION 01

WHAT SELLS NOW

01

BUILDING GOT CHEAP. SO DID EVERY COMPETITOR'S.

THEN

BUILDING WAS HARD.

Users forgave rough products.

Few competitors.

NOW

AN AFTERNOON.

Lovable, Bolt and v0 ship a polished UI in hours.

Everyone's MVP looks good now.

> **RULE** **A thin MVP is fine. A bad-looking one isn't anymore.**

ONE PROMPT, OR A PRODUCT

THE CHATGPT TEST.

If one prompt gets them the result, they won't pay.

“Summarise my meeting notes”	FREE IN ANY CHAT
“Chase every unpaid invoice and message the client”	WORTH PAYING FOR

FIVE THINGS A CHAT CAN'T DO

WHAT SURVIVES THE TEST.

01

THEIR OWN DATA

the model has never seen it

02

A WORKFLOW THEY DO BY HAND

runs without being asked

03

INSIDE TOOLS THEY USE

API, not copy-paste

04

RELIABILITY

same checked output, every time

05

DISTRIBUTION YOU OWN

no model gives you an audience

TRY IT NOW · ON YOUR OWN COMPETITOR

CLONE ONE.

```
Here are [competitor]'s homepage and pricing page.
Write the spec to rebuild it: screens, features and
pricing tiers.
```

Use one of the five competitors from your take-home.

WATCH FOR **If they can do this to them, anyone can do it to you.**

AGENCY HANDY

THE NEXT MODEL UPDATE.

01
THEN
A plain proposal and invoice maker.

→

02
AI ARRIVED
ChatGPT writes a proposal in seconds, free.

→

03
SO
An MCP layer: Claude or ChatGPT works with your Agency Handy data directly.

→

04
NOW
Building an AI assistant into the product.

The feature got cheap. The data behind it didn't.

Ask yourself: what would the next ChatGPT update make pointless?

PAID VS LIKED

FEEDBOSS.

WE BUILT

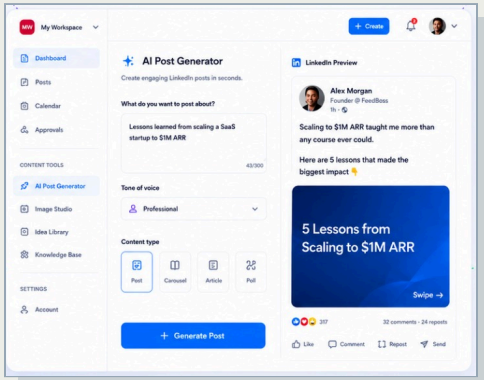

A smart growth assistant that tuned every post for reach.

THEY PAID FOR

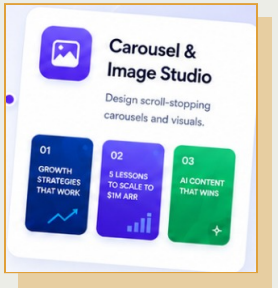

Simple posts, in their own voice, with good visuals.

The clever AI was for us. The simple AI was for them.

WHAT THEY PAID FOR

POST GENERATOR

CAROUSEL MAKER

Their voice is their data. A chat window doesn't have it.

RUN THE CHATGPT TEST ON YOUR OWN IDEA.

Does it survive?

SECTION 02

RESEARCH YOU CAN FINALLY DO

02

ONE PRICE, ONE BUYER

ASK FOR THREE BUYERS, NOT ONE.

Ask AI for your ICP and it hands you one, confidently. Ask for three at three prices and you see the choice.

$10

AN INDIVIDUAL

Decides alone. Found online.

$100

A SMALL TEAM LEAD

Compares three tools. Found in communities.

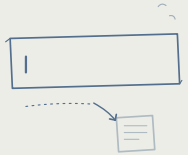

$1,000

A COMPANY

Needs approval. Found through outreach.

RULE **Pick the price, then find who pays it.**

TRY THIS PROMPT

Using my context doc and problem sheet, describe three buyers at $10, $100 and $1,000 a month. For each: who they are, what they use now, where they gather, how they decide. Back every claim with a row from my problem sheet.

SAME SIX, EVERY TIME

AND HOW AI PULLS IT.

01	POSITIONING	homepage headline	→	one promise
02	PRICING	pricing page screenshot	→	tiers side by side
03	WHO IT'S FOR	case studies and logos	→	the real buyer
04	ONBOARDING	sign up, record it	→	steps to first value
05	REVIEWS	G2, Capterra, app stores	→	complaints clustered
06	ADS	Meta and Google ad libraries	→	the message that works

RULE **Screenshots in, structure out.**

YOUR THIRD ARTIFACT

THE TEARDOWN, IN EIGHT STEPS.

01	Read my brief and ICP
02	Find 10 competitors
03	Positioning, pricing, buyer
04	Screenshot homepage and pricing
05	Pull 20 reviews each
06	Feature matrix: common vs missing
07	**A source link on every claim**
08	Save it, compare with last run

RULE **Save it in a project, not a chat.**

LIVE · ONE PROMPT, FIVE COMPETITORS

THE TEARDOWN, DONE.

How each one was found

Tool	Found by
Rosuii	Search: "Loyverse POS Bangladesh restaurant Dhaka" — their own comparison page rosuii.com/compare/loyverse ranked on it
ChillyPOS	Search: "restaurant POS app Bangladesh Google Play store reviews cloud POS taka per month"
Nexchar	Search: "Loyverse POS Bangladesh restaurant Dhaka" surfaced nexchar.com/pos-bd; confirmed with "Nexchar POS Bangladesh pricing app"
TMBill	Top result for "restaurant POS software Bangladesh Dhaka billing system for restaurants" — they run a dedicated Dhaka landing page
Loyverse	Search: "Loyverse POS Bangladesh restaurant Dhaka"; it is also the tool Rosuii chose to attack, which is a signal in itself

THE TASK

A billing tool for small Dhaka restaurants. ৳1,500 a month. Owner-run, one to three outlets.

"Every night the cash doesn't match the bills."

01

It searched like a buyer would, and shows how it found each one.

02

It said what it couldn't find: no local tool had real reviews online.

WATCH FOR **It may know their old prices. Today's screenshot is the truth.**

SAME TEARDOWN, ONE FOLLOW-UP QUESTION

HAND IT THE SCREENSHOTS.

YOU

“What repeats across these five? What does each assume the user knows?”

IT

“All five are written for a buyer at a desk. None for the owner at 11pm.”

RULE **The gap in their pitch is your pitch.**

SECTION 03

WHAT THE CATEGORY EXPECTS

They compare you to the last tool they used.

FEATURE LISTS IN, A COUNT OUT

LET AI COUNT.

Feature lists from ten competitors in. A count out.

READ THE NUMBER

WHAT THE COUNT MEANS.

IN 8 OF 10	table stakes, match it
IN 1 OR 2	**your opening**
IN NONE	check anyone wants it

In the restaurant teardown, inventory was on all five. The buyer may never open it.

WHERE IT GOES WRONG

AI DESIGNS THE AVERAGE.

"Design a SaaS landing page"

PURPLE GRADIENT, THE SAME HERO AS EVERYONE

Your ICP + three competitor screens + what to stand apart from

A DIRECTION THAT FITS

RULE **Fit in on layout. Stand out on the promise.**

TEST THE LOOK FIRST

THREE LANDING PAGES BEFORE ONE LINE OF PRODUCT.

VO OR CLAUDE DESIGN → THREE VERSIONS IN AN HOUR → SHOW FIVE REAL BUYERS → KEEP ONE

WATCH FOR Test the promise, not the colours.

WHICH COMPETITOR LOOKS MOST TRUSTWORTHY?

What exactly makes it look that way?

SECTION 04

MAKING THE CALL

04

THREE REASONS ANYONE PAYS

THE FEATURE PEOPLE PAY FOR.

01 SAVES MONEY

02 SAVES TIME

03 REMOVES RISK

Back it with a quote from your problem sheet.

WATCH FOR AI rates every feature important, and it will invent the supporting quote. Search your sheet for every quote it gives you.

Try it on the practical at the end.

CROSS-CHECKED BY HAND

RIGHTED ASKED AI THE WRONG QUESTIONS.

“I am a agency owners managing 3–15 clients what client portal for agencies tools do I need”	→ “I'm a freelancer turning into an agency. What's everyone using to keep client work organized?”
“best client portal for agencies software for agency owners managing 3–15 clients recommendations”	→ “Invoicing for agency work is a mess. What do other small agencies use?”

RULE **Don't template for AI. Give it context and let it write.**

FIVE PASSES, TWO MODELS, ONE DECISION

NEITHER MODEL GOT IT RIGHT ALONE.

01
CLAUDE
Built it.

→

02
CLAUDE
Caught its own broken English.

→

03
GPT
Redesigned the questions.

→

04
CLAUDE
Found gaps in GPT's plan.

→

05
ME
Decided.

AUTOMATE IT OpenRouter: one key, four models, one comparison.

WATCH FOR **Agreement isn't proof. Disagreement is where you learn.**

PRACTICAL · YOUR OWN IDEA

RANK YOUR FEATURES.

Rank these features by money, time or risk saved. Quote a problem sheet row for each. No quote, mark it nice-to-have. Then run the ChatGPT test on every feature.

Which feature survives?

BEFORE NEXT CLASS

THREE THINGS.

01

ONE ICP

One buyer, one price point, evidence attached.

02

THE TEARDOWN

Your five competitors, all eight steps.

03

A RANKED FEATURE LIST

Every feature backed by a quote.

NEXT CLASS: BUILDING IT.
